

„Go green with EBSCO“

New GIFT for all users of EBSCO Publishing databases

now available for FREE

on EBSCOhost platform

### **GreenFILE™**

Based on our longtime ecological activity and experience, we are offering to all our users free of charge access to new databases *GreenFILE* on EBSCOhost platform. In addition to database *Library, Information Science & Technology Abstracts* (LISTA) this database is a second gift, which EBSCO provides completely free of charge for all users around the world.

*GreenFILE* database is focusing on the relationship between human beings and the environment, with well-researched but accessible information on topics ranging from global warming to recycling to alternate fuel sources and beyond. *GreenFILE* focuses on human impact to the environment - how human population affects the Earth and what can be done to minimize that impact. Drawing on the connection between the environment and disciplines such as agriculture, education, law, health and technology, *GreenFILE* will serve as an informative resource for anyone concerned about the issues facing our planet.

*GreenFILE's* initial release will include A&I for more than 600 titles, including comprehensive coverage - from to volume 1, issue 1 to present - for *Bioscience* (back to 1964), *Conservation Biology* (back to 1987), *Journal of Ecology* (back to 1913) and *Journal of Environmental Planning & Management* (back to 1948).

The total number of records is approximately 295,000, and full text is provided for more than 4,600 records from open access titles.
